Hallbin : Great for Gaming and Daily Use

★★★★★

About [MSI GE70 0ND](#)

Pros: Full HD Screen, 3rd gen Core i7, Lightw eight

Cons: Plastic Frame, No 5.1 Output

Very good laptop on 1,200 budget scale. High performance with Core i7 3610QM, super fast.

How ever the graphics card is not that good, only scores a 6.9 and 5.9 on my Windows 8. Also, it does not support 5.1 output, which is not good for a gaming PC.

The plastic frame is not good, either. Yesterday I put my Macbook Air and when I removed it, I found a scratch near touchpad.

But anyway, you will find it easy to carry and I am afraid it is a super portable laptop with a 17 inch screen. Only 5.95lbs.

RLHutch : Great for processing photos on the go. ★★★★★

About [HP PAVILION dm1-4000er](#)

I bought this "computer because it had the RAM and Hard Drive I needed to process my images while traveling. I was able to load my photo processing programs. It is light and compact. Although it is slower than my big computer and has no internal disk drive, for travel it is perfect for me. I set it up just like my larger laptop so everything looks and works the same.

mfk3 : Really good laptop ★★★★★

About [ASUS K53E](#)

Pros: Fast, nice display plenty of outputs

Cons: nothing

From the day I brought it out of the box and started using it, this laptop have been just great. It's fast, renders graphics very well and compiles really fast. I use Visual C++ and Autodesk 3DS, this machine handles it all well.

Actually, it was a lot less expensive at Best Buy than at a famous webstore.

JB2 : Perfect for Back to School ★★★★★

★★★

About [ASUS K53E](#)

Pros: Quality product, tough, and lasts

Cons: Price: did not buy during a sale because I needed it so badly

Back to school for me! I was tired of sharing a computer with my son... also an Asus. He falls asleep on the couch with it and it has survived his rough handling of it and dropping it onto the floor. I decided to go with Asus again, went with the second gen i5... it's really fast! I don't like how the newest versions have a touch pad that does not have the 2 lower buttons, it just

toggles in the corner. This Asus has 2 buttons below the touchpad, which is really important to me. The screen is big and crisp, but not too big to carry it around. We have 4 Asus at home now, one for all of us. Considered Toshiba, Dell and HP, but we decided Asus is superior product for smaller price. The 2-3 year old Asus computer, used everyday for 4-12 hours still works, just had to buy a battery for it, only \$34.

To sum it up: Tough, A Good Value, Works Everyday -All Day and has Nice Features. Would buy another.... and another... and another.
